$$0.25y \leq -0.10x + 30$$

$$y \leq -0.4x + 120$$

$$y \leq -\frac{2}{5}x + 120$$

b) Using your graph, give two possible combinations of text and picture messages she can send and stay within her budget. (Answers may vary)

80 text + 40 picture

140 text + 10 picture

8. Scott makes \$12 per hour babysitting and \$8 per hour working at the grocery store. He will need to make at least \$600 to buy a new computer.

a) Write a linear inequality to represent this situation, then graph.

$x = \text{babysitting}$

$y = \text{grocery store}$

$$12x + 8y \geq 600$$

$$8y \geq -12x + 600$$

$$y \geq -\frac{3}{2}x + 75$$

b) Using your graph, give two possible combinations of the number of hours Scott can babysit and work in the grocery store to ensure he can afford his new computer. (Answers may vary)

70 hours babysitting + 0 at grocery store

30 hours babysitting and 35 at grocery store.

Systems of Linear Inequalities	The solution to a system of linear inequalities is the set of ordered pairs that satisfy ALL the linear inequalities . The solution can be shown by graphing.
	① GRAPH and SHADE each linear inequality.
	② The SOLUTION to the system is where the shading overlaps .

Directions: Graph each system of linear inequalities. Clearly indicate the solution region.

8. To raise money to attend Boy Scout camp, Alec is selling popcorn. Small bags of popcorn sell for \$4 each and large bags sell for \$6 each. He needs to earn at least \$300 to attend camp. He will also earn a badge if he sells at least 60 bags total of any combination.
