☑ Try It!

Twice the difference of Felipe's age, f, and 4 is at least 2.
What are possible values for Felipe's age? Graph the solution.

Write the inequality. $\boxed{} \left(\boxed{} \right) \bigcirc \boxed{}$

Use the Distributive Property to rewrite the inequality as $2f - \boxed{} \geq 2$.

Solve the inequality.   Graph the solution.

$2f \geq \boxed{}$

3   4   5   6   7   8

$f \geq \boxed{}$

Try It!

Solve the inequality $-1 - 6(6 + 2x) < 11$. Then graph the solution.
