1. Yolanda is planning out her vegetable garden. She decides that her garden will be square. Below are possible sizes of the garden she will create.
a. Complete the table by continuing the pattern.

| Side length | 1 foot | 2 feet | 3 feet | 4 feet | 5 feet | $x$ feet |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

b. Yolanda decides the length of her square vegetable garden will be 17 ft . She calculates that the area of the garden is $34 \mathrm{ft}^{2}$. Determine if Yolanda's calculation is correct. Explain.
2. Yolanda creates garden cubes to plant flowers. She will fill the cubes with soil and needs to know the amount of soil that will fill each garden cube. Volume is determined by the following formula: $V=s^{3}$, where $s$ represents the side length.

a. Represent the volume of the garden cube above using a numerical expression.
b. Evaluate the expression to determine the volume of the garden cube, and the amount of soil she will need for each cube.
3. Explain why $\left(\frac{1}{2}\right)^{4}=\frac{1}{16}$.
4. Yolanda is building a patio in her back yard. She is interested in using both brick and wood for the flooring of the patio. Below is the plan she has created for the patio. All measurements are in feet.
a. Create an expression to represent the area of the patio.

b. Yolanda's husband develops another plan for the patio because he prefers the patio to be much wider than Yolanda's plan. Determine the length of the brick section and the length of the wood section. Then use the dimensions to write an expression that represent the area of the entire patio.

24

5. The landscaper hired for Yolanda's lawn suggests a patio that has the same measure of wood as it has brick.

a. Express the perimeter of the patio in terms of $x$ first using addition, and then using multiplication.
b. Use substitution to determine if your expressions are equivalent. Explain.

6. Elena and Jorge have similar problems and find the same answer. Each determines that the solution to their problem is 24.

Elena: $(14+42) \div 7+4^{2}$
Jorge: $14+(42 \div 7)+4^{2}$
a. Evaluate each expression to determine if both Elena and Jorge are correct.
b. Why would each find the solution of 24 ? What mistakes were made, if any?
7. Jackson gave Lena this expression to evaluate: $14(8+12)$. Lena said that to evaluate the expression was simple; just multiply the factors 14 and 20. Jackson told Lena she was wrong. He solved it by finding the product of 14 and 8 , then adding that to the product of 14 and 12 .
a. Evaluate the expression using each student's method.

Solve the problem using tables and equations and then check your answer with the word problem. Try to find the answer only using two rows of numbers on your table.

A pet store owner, Byron, needs to determine how much food he needs to feed the animals. Byron knows that he needs to order the same amount of bird food as hamster food. He needs four times as much dog food as bird food, and needs half the amount of cat food as dog food. If Byron orders 600 packages of animal food, how much dog food does he buy? Let $b$ represent the amount of bird food.

Write an equation and solve for the missing angle in each question.

1. Alejandro is repairing a stained glass window. He needs to take it apart to repair it. Before taking it apart he makes a sketch with angle measures to put it back together.
Write an equation and use it to determine the measure of the unknown angle.

2. Hannah is putting in a tile floor. She needs to determine the angles that should be cut in the tiles to fit in the corner. The angle in the corner measures $90^{\circ}$. One piece of the tile will have a measure of $38^{\circ}$. Write an equation and use it to determine the measure of the unknown angle.

1. Gertrude is deciding which cell phone plan is the best deal for her to buy. Super Cell charges a monthly fee of $\$ 10$ and also charges $\$ 0.15$ per call. She makes a note that the equation is $M=0.15 C+10$, where $M$ is the monthly charge and $C$ is the number of calls placed. Global Cellular has a plan with no monthly fee, but charges $\$ 0.25$ per call. She makes a note that the equation is $M=0.25 C$, where $M$ is the monthly charge and $C$ is the number of calls placed. Both companies offer unlimited text messages.
a. Make a table for both companies showing the cost of service, $M$, for making from 0 to 200 calls per month. Use multiples of 20 .

b. Construct a graph for the two equations on the same graph. Use the number of calls, $C$, as the independent variable, and the monthly charge, $M$, as the dependent variable.

c. Which cell phone plan is the best deal for Gertrude? Defend your answer with specific examples.
2. Sadie is saving her money to buy a new pony, which costs $\$ 600$. She has already saved $\$ 75$. She earns $\$ 50$ per week working at the stables and wonders how many weeks it will take to earn enough for a pony of her own.
a. Make a table showing the week number, $W$, and total savings, $S$, in Sadie's savings account.

b. Show the relationship between the number of weeks and Sadie's savings using an expression.
c. How many weeks will Sadie have to work to earn enough to buy the pony?
3. The elevator at the local mall has a weight limit of 1,800 pounds and requires that the maximum person allowance be no more than nine people.
a. Let $x$ represent the number of people. Write an inequality to describe the maximum allowance of people allowed in the elevator at one time.
b. Draw a number line diagram to represent all possible solutions to part (a).
c. Let $w$ represent the amount of weight. Write an inequality to describe the maximum weight allowance in the elevator at one time.
d. Draw a number line diagram to represent all possible solutions to part (c).
4. Devin's football team carpools for practice every week. This week is his parents' turn to pick up team members and take them to the football field. While still staying on the roads, Devin's parents always take the shortest route in order to save gasoline. Below is a map of their travels. Each gridline represents a street and the same distance.

Devin's father checks his mileage and notices that he drove 18 miles between his house and Stop 3.
a. Create an equation and determine the amount of miles each gridline represents.
b. Using this information, determine how many total miles Devin's father will travel from home to the football field, assuming he made every stop. Explain how you determined the answer.
c. At the end of practice, Devin's father dropped off team members at each stop and went back home. How many miles did Devin's father travel altogether?
5. For a science experiment, Kenneth reflects a beam off a mirror. He is measuring the missing angle created when the light reflects off the mirror. (Note: figure is not drawn to scale.)

Use an equation to determine the missing angle, labeled $x$ in the diagram.
