Teacher’s Guide to Using the
Chapter 13 Resource Masters

The **Fast File** Chapter Resource system allows you to conveniently file the resources you use most often. The *Chapter 13 Resource Masters* includes the core materials needed for Chapter 13. These materials include worksheets, extensions, and assessment options. The answers for these pages appear at the back of this booklet.

All of the materials found in this booklet are included for viewing and printing in the *Pre-Algebra TeacherWorks* CD-ROM.

**Vocabulary Builder**  Pages vii-viii include a student study tool that presents up to twenty of the key vocabulary terms from the chapter. Students are to record definitions and/or examples for each term. You may suggest that students highlight or star the terms with which they are not familiar.

**When to Use** Give these pages to students before beginning Lesson 13-1. Encourage them to add these pages to their Pre-Algebra Study Notebook. Remind them to add definitions and examples as they complete each lesson.

**Study Guide and Intervention**  Each lesson in Pre-Algebra addresses one or two objectives. There is one Study Guide and Intervention master for each lesson.

**When to Use** Use these masters as reteaching activities for students who need additional reinforcement. These pages can also be used in conjunction with the Student Edition as an instructional tool for students who have been absent.

**Skills Practice**  There is one master for each lesson. These provide computational practice at a basic level.

**When to Use** These masters can be used with students who have weaker mathematics backgrounds or need additional reinforcement.

**Practice**  There is one master for each lesson. These problems more closely follow the structure of the Practice and Apply section of the Student Edition exercises. These exercises are of average difficulty.

**When to Use** These provide additional practice options or may be used as homework for second day teaching of the lesson.

**Reading to Learn Mathematics**  One master is included for each lesson. The first section of each master asks questions about the opening paragraph of the lesson in the Student Edition. Additional questions ask students to interpret the context of and relationships among terms in the lesson. Finally, students are asked to summarize what they have learned using various representation techniques.

**When to Use** This master can be used as a study tool when presenting the lesson or as an informal reading assessment after presenting the lesson. It is also a helpful tool for ELL (English Language Learner) students.

**Enrichment**  There is one extension master for each lesson. These activities may extend the concepts in the lesson, offer an historical or multicultural look at the concepts, or widen students’ perspectives on the mathematics they are learning. These are not written exclusively for honors students, but are accessible for use with all levels of students.

**When to Use** These may be used as extra credit, short-term projects, or as activities for days when class periods are shortened.
Assessment Options

The assessment masters in the Chapter 13 Resource Masters offer a wide range of assessment tools for intermediate and final assessment. The following lists describe each assessment master and its intended use.

Chapter Assessment

Chapter Tests

- **Form 1** contains multiple-choice questions and is intended for use with basic level students.
- **Forms 2A and 2B** contain multiple-choice questions aimed at the average level student. These tests are similar in format to offer comparable testing situations.
- **Forms 2C and 2D** are composed of free-response questions aimed at the average level student. These tests are similar in format to offer comparable testing situations. Grids with axes are provided for questions assessing graphing skills.
- **Form 3** is an advanced level test with free-response questions. Grids without axes are provided for questions assessing graphing skills.

All of the above tests include a free-response Bonus question.

- The **Open-Ended Assessment** includes performance assessment tasks that are suitable for all students. A scoring rubric is included for evaluation guidelines. Sample answers are provided for assessment.
- **A Vocabulary Test**, suitable for all students, includes a list of the vocabulary words in the chapter and ten questions assessing students’ knowledge of those terms. This can also be used in conjunction with one of the chapter tests or as a review worksheet.

Intermediate Assessment

- Four free-response **quizzes** are included to offer assessment at appropriate intervals in the chapter.
- A **Mid-Chapter Test** provides an option to assess the first half of the chapter. It is composed of both multiple-choice and free-response questions.

Continuing Assessment

- The **Cumulative Review** provides students an opportunity to reinforce and retain skills as they proceed through their study of Pre-Algebra. It can also be used as a test. This master includes free-response questions.
- The **Standardized Test Practice** offers continuing review of pre-algebra concepts in various formats, which may appear on the standardized tests that they may encounter. This practice includes multiple-choice, grid-in, and open-ended questions. Bubble-in and grid-in answer sections are provided on the master.

Answers

- Page A1 is an answer sheet for the Standardized Test Practice questions that appear in the Student Edition on pages 702–703. This improves students’ familiarity with the answer formats they may encounter in test taking.
- The answers for the lesson-by-lesson masters are provided as reduced pages with answers appearing in red.
- Full-size answer keys are provided for the assessment masters in this booklet.
This is an alphabetical list of key vocabulary terms you will learn in Chapter 13. As you study this chapter, complete each term’s definition or description. Remember to add the page number where you found the term. Add these pages to your Pre-Algebra Study Notebook to review vocabulary at the end of the chapter.

The variable \(x\) is the temperature in °F and \(y\) is the relative humidity expressed as a whole number. What is the degree of the polynomial?

To subtract polynomials, subtract like terms.

**Example**

Find \((x^2 + 3x - 6) - (4x^2 - 1)\).

**Method 1** Subtract vertically.
\[
\begin{array}{c}
x^2 + 3x - 6 \\
(-) 4x^2 - 1 \\
\hline
-3x^2 + 3x - 5
\end{array}
\]

**Method 2** Add the additive inverse of \(4x^2 - 1\), which is 
\((-1)(4x^2 - 1)\) or 
\((-4x^2 + 1)\).
\[
\begin{align*}
(x^2 + 3x - 6) - (4x^2 - 1) &= (x^2 + 3x - 6) + (-4x^2 + 1) \\
&= x^2 + 3x - 6 + 3x + (-6 + 1) \\
&= -3x^2 + 3x - 5

Polynomials with Fractional Coefficients

Polynomials may have fractional coefficients in some or all of the terms. Computation with these types of polynomials is done in the same way as with whole-number coefficients.

Add or subtract. Write all coefficients as fractions.

1. Add $\frac{3}{4}x^2 + \frac{2}{5}y^2$ and $\frac{1}{6}x^2 - \frac{4}{3}y^2$.

2. From $\frac{1}{2}x^2 - \frac{1}{3}xy^2 + \frac{1}{4}y^2$, take $\frac{1}{3}x^2 - \frac{1}{2}xy + \frac{5}{6}y^2$.

3. Add $\frac{3}{2}x - \frac{4}{5}y$, $\frac{7}{8}x - \frac{6}{7}y$, and $y - \frac{1}{4}x$.

4. Subtract $\frac{1}{6}x^2 + \frac{1}{8}x - \frac{1}{4}$ from $\frac{2}{3}x^2 + \frac{5}{8}x + \frac{1}{2}$.

5. Add $\frac{1}{3}xy + \frac{11}{12}y^2$ to $\frac{4}{9}xy - \frac{1}{6}y^2$.

6. Add $\frac{1}{5}x^2 - \frac{1}{8}x - \frac{1}{3}$ and $\frac{3}{10}x^2 + \frac{5}{8}x + \frac{1}{9}$.

7. From $\frac{1}{2} + \frac{2}{3}y + \frac{3}{4}y^2$, take $\frac{1}{8} + \frac{1}{6}y - \frac{5}{6}y^2$.

8. Subtract $\frac{7}{12}x - \frac{1}{4}$ from $\frac{3}{4}x - \frac{1}{3}$.

9. Add $\frac{3}{8}x^2 - \frac{1}{3}xy + \frac{5}{9}y^2$ and $\frac{1}{2}x^2 - \frac{1}{2}xy - \frac{1}{3}y^2$.

10. Subtract $\frac{3}{4}y^2 + \frac{1}{2}y$ from $\frac{4}{3}y^2 + \frac{7}{8}y$. 
The Distributive Property can be used to multiply a polynomial by a monomial.

a. Write an expression that represents the area of the rectangular region outlined on the photo.

b. Recall that $2(4 + 1) = 2(4) + 2(1)$ by the Distributive Property. Use this property to simplify the expression you wrote in part a.

Helping You Remember

3. *Distribute* is a common word in the English language.

Polynomials and Volume

The volume of a rectangular prism can be written as the product of three polynomials. Recall that the volume equals the length times the width times the height.

Study Guide and Intervention
Linear and Nonlinear Functions

Linear functions have constant rates of change. Their graphs are straight lines and their equations can be written in the form \( y = mx + b \). Nonlinear functions do not have constant rates of change and their graphs are not straight lines.

**Example 1** Determine whether each equation represents a linear or nonlinear function.

a. \( y = 9 \)

This is linear because it can be written as \( y = 0x + 9 \).

b. \( y = x^2 + 4 \)

This is nonlinear because the exponent of \( x \) is not 1, so the equation cannot be written in the form \( y = mx + b \).

Tables can represent functions. A nonlinear function does not increase or decrease at a constant rate.

**Example 2** Determine whether each table represents a linear or nonlinear function.

a. 

<table>
<thead>
<tr>
<th>( x )</th>
<th>( y )</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>-7</td>
</tr>
<tr>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>4</td>
<td>9</td>
</tr>
<tr>
<td>6</td>
<td>17</td>
</tr>
</tbody>
</table>

As \( x \) increases by 2, \( y \) increases by 8. The rate of change is constant, so this is a linear function.

b. 

<table>
<thead>
<tr>
<th>( x )</th>
<th>( y )</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>100</td>
</tr>
<tr>
<td>5</td>
<td>75</td>
</tr>
<tr>
<td>10</td>
<td>0</td>
</tr>
<tr>
<td>15</td>
<td>-125</td>
</tr>
</tbody>
</table>

As \( x \) increases by 5, \( y \) decreases by a greater amount each time. The rate of change is not constant, so this is a nonlinear function.

**Exercises**

Determine whether each equation or table represents a linear or nonlinear function. Explain.

1. \( x + 3y = 9 \)

2. \( y = \frac{8}{x} \)

3. \( y = 6x(x + 1) \)

4. \( y = 9 - 5x \)

5.

David R. Hedgley

African-American mathematician David R. Hedgley, Jr. (1937– ) solved one of the most difficult problems in the field of computer graphics—how to program a computer to show any three-dimensional object from a given viewpoint just as the eye would see it. Hedgley’s solution helped researchers in aircraft experimentation. Hedgley received an M.S. in Mathematics from California State University in 1970 and a Ph.D. in Computer Science from Somerset University in England in 1988. Hedgley has received numerous national achievement awards.

Polynomials in three variables are needed to describe some three-dimensional objects. Each variable represents one of the three dimensions: height, width, and depth.

\[ P_1: x^2 + y^2 + z^2 + 10x + 4y + 2z - 19 \]
\[ P_2: 2x^2 + 2y^2 + 2z^2 - 2x - 3y + 5z - 2 \]

1. Add the polynomials \( P_1 \) and \( P_2 \).
2. Subtract the polynomials, \( P_1 \) from \( P_2 \).

If the polynomials above were each set equal to zero, they would form equations describing two different spheres in three-dimensional space, or 3-space. The coordinate plane you studied in Chapter 2 represents two-space. You described most lines in that plane by an equation in two variables. Each point on a line could be written as an ordered pair of numbers \((x, y)\). Each point on any figure in 3-space can be written as an ordered triple of numbers \((x, y, z)\).

3. What are the values of \( x \), \( y \), and \( z \) for point \( A \) in the diagram?
4. Give the ordered triple representing each of the points \( B \) through \( G \) in the diagram.
To graph a quadratic or cubic function, make a table of values and then plot the points.

2. Write a cubic function. Explain what makes it a cubic function and what its graph would look like.

Helping You Remember

3. You have learned to graph quadratic and cubic functions. Make a list of the steps you use to graph the two functions.
Translating Quadratic Graphs

When a figure is moved to a new position without undergoing any rotation, then the figure is said to have been translated to the new position.

The graph of a quadratic equation in the form $y = (x - b)^2 + c$ is a translation of the graph of $y = x^2$.

Start with a graph of $y = x^2$.
Slide to the right 4 units.
$y = (x - 4)^2$
Then slide up 3 units.
$y = (x - 4)^2 + 3$

The following equations are in the form $y = x^2 + c$. Graph each equation.
1. $y = x^2 + 1$
2. $y = x^2 + 2$
3. $y = x^2 - 2$

The following equations are in the form $y = (x - b)^2$. Graph each equation.
4. $y = (x - 1)^2$
5. $y = (x - 3)^2$
